

# ANEMO 4P

Instruments for:  
METEOROLOGY  
HYDROLOGY  
WATER QUALITY  
AIR QUALITY  
AIR & GASFLOW

**KRITECH**

## ANEMO 4P

### Wind strength and speed precisely captured

The handy anemometer measures wind strength and speed and works on the eddy current principle. Different measurement units m/s, km/h, knots and the Beaufort Scale can be selected in the scale range. The red luminescent pointer with after-glow and white lettering allow for particularly easy reading of the indicator.

### Special extra options

If required, the Wind Gauge Anemo is also available with pointer locking. It can be mounted on a stand using a screw thread in the handle. However, the device is not suitable for continuous use outside.

Material : Black ABS housing  
Scales : 4 different large scales.  
Measuring range : 0...35 m/s / 0...70 kn / 0...120 km/h / 0...12 Bft.

### Variety of applications :

- Sailing, Gliding, Paragliding
- Athletics
- Wind surfing
- Racing drivers
- Ski jumping
- Model airplane building
- Meteorologists
- Technical Inspection Authorities

### Your advantages at a glance :

- No power source necessary due to mechanical operation
- Environmentally-friendly (no battery disposal)
- Selection of four scale ranges for different measurement units
- Easily readable indicator
- No maintenance
- Always ready for immediate use
- Ease of use
- Inside thread for attachment to a stand Athletics
